

When you're successful, we're successful.

@task believes in and follows seven principles that lead to business success.

Principle #1 | Real-Time Planning

@task's unique and effective project management software tools give your organization the power to plan in real-time. Whether your job is to max out an entire division for the next six months or figure out how that emergency project is going to affect what's already happening, @task will keep you covered all in real-time. [Click here to learn more.](#)

Principle #2 | Fast Communication

Real improvement starts to happen with good communication. @task provides a full set of workflow notifications and tools to help people talk about tasks and issues, resolve problems, and get on their way. No need to wait for the weekly status meeting—@task customers regularly recognize 20%-40% productivity improvements, with some as high as 500%. [Click here to learn more.](#)

Principle #3 | User Buy-In

If no one can figure out how to use a software solution, they won't use it! @task software is more intuitive and user-friendly than all other project management systems. In fact, you don't need to have formal training in project management to get great results with @task. With as broad a feature set as the high-end "enterprise" PPM solutions, @task is still easy for everyone on your team to use – which means they will.

Principle #4 | Complete Transparency

Being blindsided by a problem that has gone undetected is an executive's worst nightmare. Fortunately, @task is all about addressing project management life cycle problems immediately. When something needs attention, @task will make sure the right people know about it through workflow notifications, issue routing, and powerful reporting. [Click here to learn more.](#)

Principle #5 | Full Compliance

Business has changed; external pressure has increased. You can't just get things done—you have to be able to prove that you are doing them in compliance with new laws and regulations. @task's auditing, process enforcement, and powerful reporting capabilities allow you to eliminate that entire headache. [Click here to learn more.](#)

Principle #6 | IT Freedom

When it comes to operating systems, browsers, and servers, everyone has a different preference; and when you're collaborating internationally, IT environments differ. That's why @task is completely platform independent. You can use it in any IT environment, anytime, anywhere—even on your favorite mobile device!

Principle #7 | Absolute Security

No one is more concerned about the safety of your data than @task. That's why @task gives you choices for storing your data: you can store it on your own server or store it on @task's secure server. Either way, you can sleep soundly at night knowing your data is in a safe place.
